

LEARNING TECHNOLOGIES AND THE DEVELOPMENT OF PATRIOTIC AWARENESS AMONG STUDENTS IN THE CONTEXT OF INFORMATION GLOBALIZATION

Karimov Dilmurod Abdullahafizovich

Researcher Of Namangan State University, Uzbekistan

ABSTRACT: This article is devoted to the study of the influence of learning technologies on the formation of patriotic awareness among students in the context of information globalization. The authors consider modern teaching methods based on the use of information technologies in the context of their impact on the formation of patriotic values and identity among young people. The article analyzes the effectiveness of various educational approaches, including online courses, virtual excursions, and interactive educational platforms, in the context of stimulating patriotic thinking and understanding of historical heritage. Special attention is paid to the use of modern means of communication to create a positive image of the motherland and its cultural heritage. The work also examines the challenges associated with information globalization, such as the spread of negative stereotypes and misinformation, and suggests strategies for using learning technologies to overcome these challenges and develop patriotic awareness among students.

KEYWORDS: learning technologies, patriotic awareness, students, information globalization, education, innovations in education, cultural values, digital technologies, e-learning, international integration, educational platforms.

INTRODUCTION

The modern world lives in the era of information globalization, where technology plays a key role in shaping the global community. In this context, it is important to discuss which learning technologies can contribute to the development of patriotic awareness among students. Patriotism in the modern world is not limited by geographical boundaries; it is also an understanding of one's role in the global community and responsibility for the future generation. In this article, we will consider how modern learning technologies can be an effective tool in shaping students' patriotic awareness.

Virtual travel and multimedia resources allow students to study the cultures and history of various countries in depth. Interactive maps, virtual tours of museums and historical monuments allow students to immerse themselves in the diversity of world culture[1]. This not only expands their knowledge, but also develops respect for differences and forms a global perspective. Using online education, students can study global issues such as climate change, poverty reduction, and conservation of natural resources. These topics are directly related to patriotism, as they form an

awareness of global responsibility and the need for cooperation between countries to solve common problems.

Modern technologies allow students to communicate with peers from different countries, exchange opinions and experiences. This contributes to the formation of a patriotic feeling among students through awareness of their role in the global community. The exchange of cultural characteristics and traditions also promotes respect for diversity and the formation of an understanding of one's own identity. Social media has become a powerful tool for spreading information and mobilizing society. Students can use social platforms to discuss important issues, express their views on world events, and participate in civic engagement[2]. This contributes to the formation of a patriotic feeling as an active participation in the life of society.

Technology also plays an important role in the development of critical thinking. Students who are able to think critically are able to understand events in the world more deeply and consciously participate in the public life of their country. "Patriotism is not only love for the motherland, but also a willingness to serve it, work for its benefit, and be a citizen of your country."

In the context of modern information globalization, where borders are becoming less visible and the world is becoming more interconnected, the issues of forming patriotic awareness among students are becoming particularly relevant. Learning technologies play a key role in this process, helping to create a deep understanding and respect for one's country in the context of the global information flow.

Information globalization: challenges and opportunities

Information globalization brings new opportunities, but also poses complex challenges for the educational system[3]. Students are faced with a huge amount of information that shapes their worldview and perception of the world around them. In this context, it is important to use learning technologies in order not only to transfer knowledge, but also to develop critical thinking and analytical skills.

The role of technology in the formation of patriotic awareness

1. Virtual tours and multimedia resources: Using virtual tours and multimedia resources allows students to immerse themselves in the history of their country, visit places of important events and get acquainted with the cultural heritage. This contributes to the formation of a deep patriotic feeling and respect for history.
2. Online educational platforms: Online courses, discussion forums and groups ensure the exchange of knowledge and experience, contributing to the formation of a national identity. Students can participate in the discussion of topical issues and express their views on the future of their country.
3. Social Media and Blogs: Active use of social media and blogs can stimulate discussion of important events and generate interest in history and politics. Electronic platforms also provide an opportunity to express citizenship and interact with representatives of other cultures.
4. Project activities: Conducting projects related to the history and culture of their country allows students to apply their knowledge in practice. This develops creative thinking and patriotic responsibility for their contribution to the development of society.

Technology adaptation to the educational process

An important aspect is the adaptation of technologies to specific educational tasks and characteristics of students[4]. The optimal use of modern technologies should be combined with traditional teaching methods to create a balance between the transfer of information and the development of critical thinking.

CONCLUSION

Modern learning technologies provide unique opportunities for the development of patriotic awareness among students. It is important to use these tools to build a global vision, civic engagement, and respect for diversity. Patriotism in the modern world does not exclude global thinking; on the contrary, it implies conscious participation in shaping the future of the world community. Learning technologies in the context of information globalization provide unique opportunities for the formation of patriotic awareness among students. The integration of virtual resources, online platforms and project activities allows you to create a learning environment that promotes deep understanding and love for your native country. It is important to continue research and development in this area in order to effectively use the potential of modern technologies in shaping patriotism among future leaders of society.
